

## Timelog assignment 2

2016-02-21 13:02 – read the assignment, don't see a reason to plan the first subtask really, I mean uml is already a plan itself to later implement/check or whatever. I will plan however the time it will get and what to learn.

2016-02-22 16:35 – finished with task 1.

2016-02-22 16:35 – starting with task 2

2016-02-22 18:29 – finished with task 2

2016-02-25

15:02 – whenever trying to get the book id its undefined, the request just don't pick it up for some reason, plus the require('jQuery') is undefined (I think.. the node module doesn't exist)

15:03 – installed jquery module, did not do anything maybe it was already installed globally

15:18 – going to ask teacher with mail

15:29 – can make the xml part and hopefully the delete part can be achived later (if only getting the id the delete will be avhived)

16:31 – with the xml I realised I made an error hah, so everything is working i.e. the id part (so I can make the delete and so on). Also I added the xml file, so I now have a database

17:02 – done with both remove and get from xml part now just write a reflection and send it.
