

2016-02-02

19:56 - finished reading the assignment tasks

20:00 - start with planning task 1

20:06 - (having some problems finding the folder models)
this may be due to I'm running the sever with Node.js

2016-02-04

19:00 – with the updated info I hope I can make it this time

19:01 – still no models folder, going to create one myself in the app folder

19:10 – task is now done, if .../api/books is called, the book list will be printed in the prompt.

19:49 – as reading the subtask **b**, it wants the objects in json. Problem is that they already are.

19:52 – subtask c, as the anonymous function uses a callback function it will be a good way to send data back.

19:53 – it works, display books in the /#/books as visible object, and in /api/books as json

2016-02-11

16:22 – starting to write the vision document

16:22 – some quick research of the application

16:59 – done with the vision document

2016-02-14

19:50 – starting with project plan

20:30 – finished with assignment 1
